Deployment Manual for Nventory Project

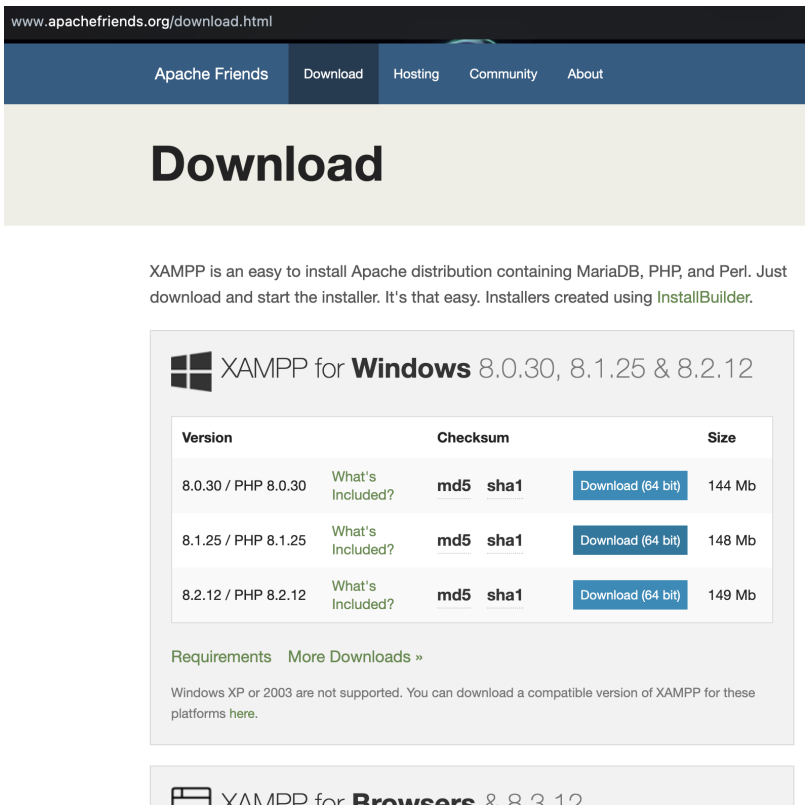

Prerequisites

- **XAMPP 8.2.4-0** (Download from apachefriends.org)
- **Node.js** (Recommended: v18+)
- **Git** (for cloning the repository)

---

1. Install XAMPP

- Download and install XAMPP 8.2.4-0 for your operating system.
- Start XAMPP and ensure Apache and MySQL services are running.

2. Clone or Copy the Project

- **Clone the repository using Git:**

```
git clone <your-repository-url>
```

```
unarchive the project from the .zip
```

- Or place the entire project folder into the `htdocs` directory of your XAMPP installation:
  - **Windows:** `C:\xampp\htdocs\ITP`
  - **macOS:** `/Applications/XAMPP/htdocs/ITP`

3. Install Backend Dependencies

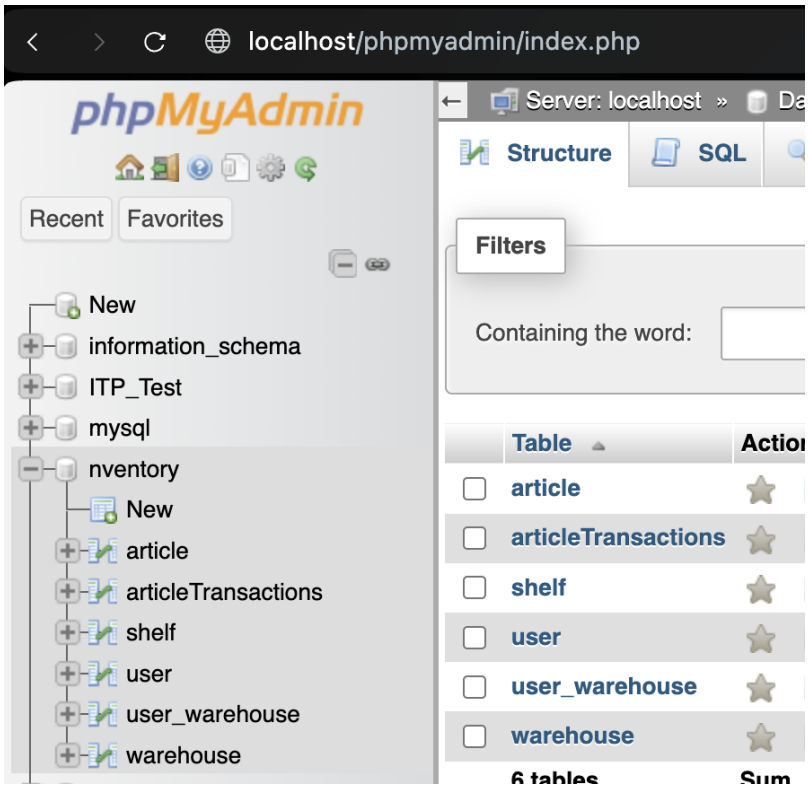

- Open a terminal/command prompt and navigate to the backend directory:

```
cd <project-root>/nventory-backend
npm install
```

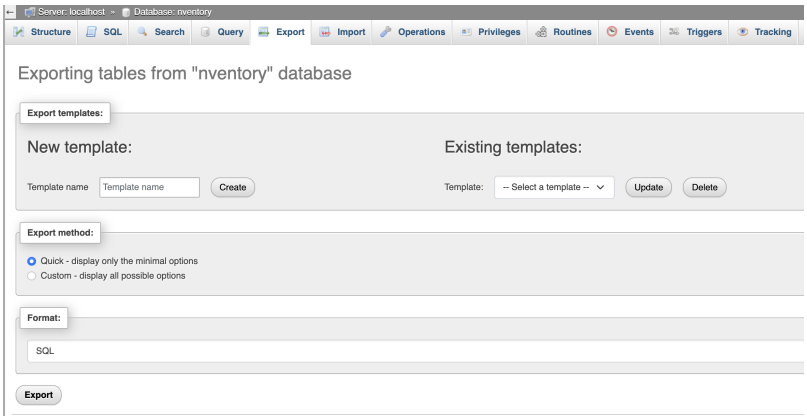

- This installs the neccessary dependencies to run the nestJS server

4. Import the Database

- Open phpMyAdmin in your browser.

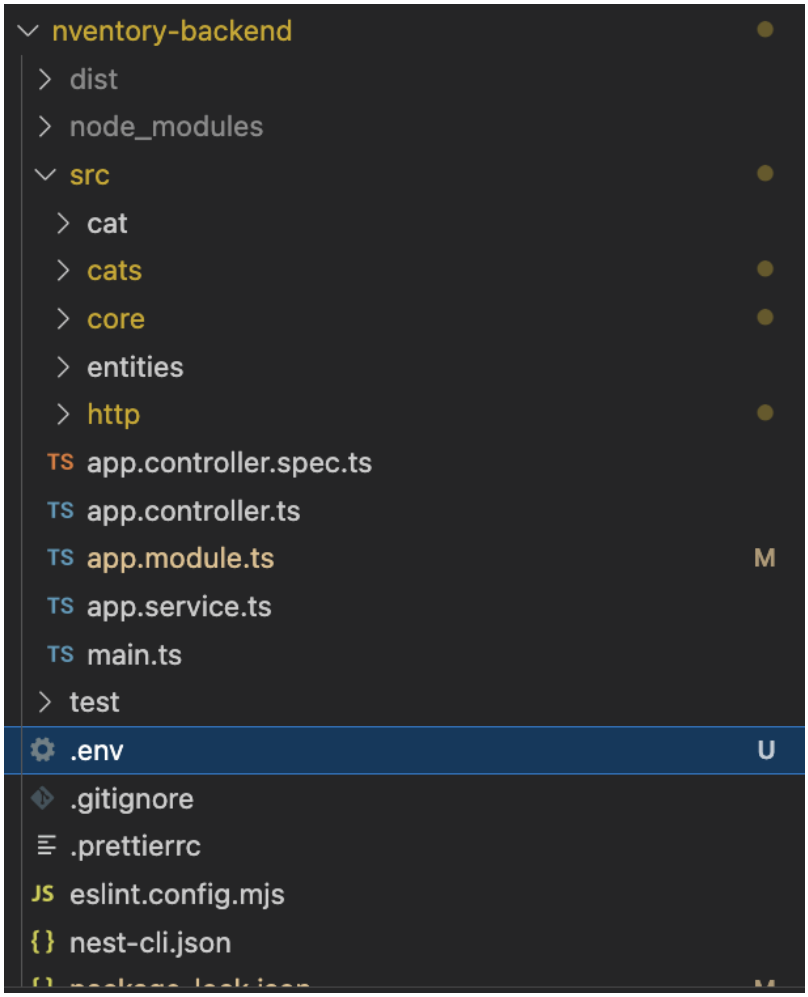

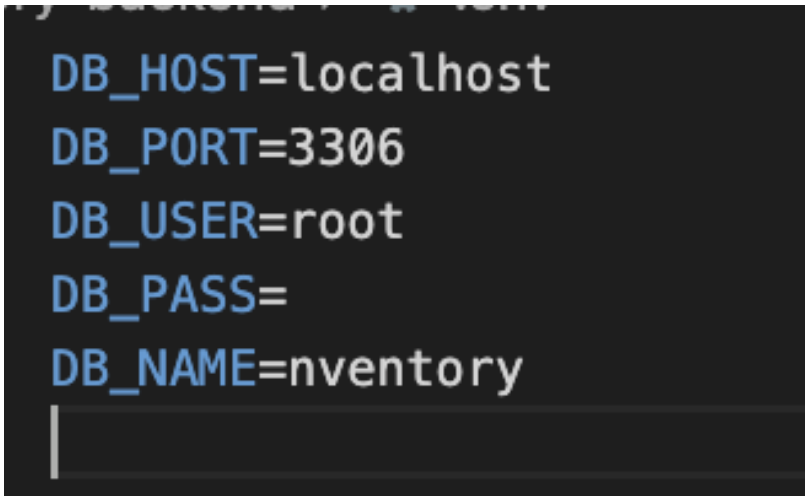

- Create a new database (e.g., `nventory`).
- Import the SQL dump file: `DATABASE/nventory_dump.sql`.

5. Configure Backend Database Connection

- Edit `nventory-backend/.env` if needed to match your local MySQL credentials (user, password, database name).

6. Start the Backend Server

- In the backend directory, run:

```
npm run start
```

- This starts the backend server and gets a connection to the database

7. Access the Application

- Open your browser and go to:
  - **Windows:** `http://localhost/`
  - **macOS:** `http://localhost/`
